NEW YORK TAXI RIDES | A ONE-PAGE DATA STORY

Analysis of 6,427 cleaned rides | Exploratory findings, not causal claims

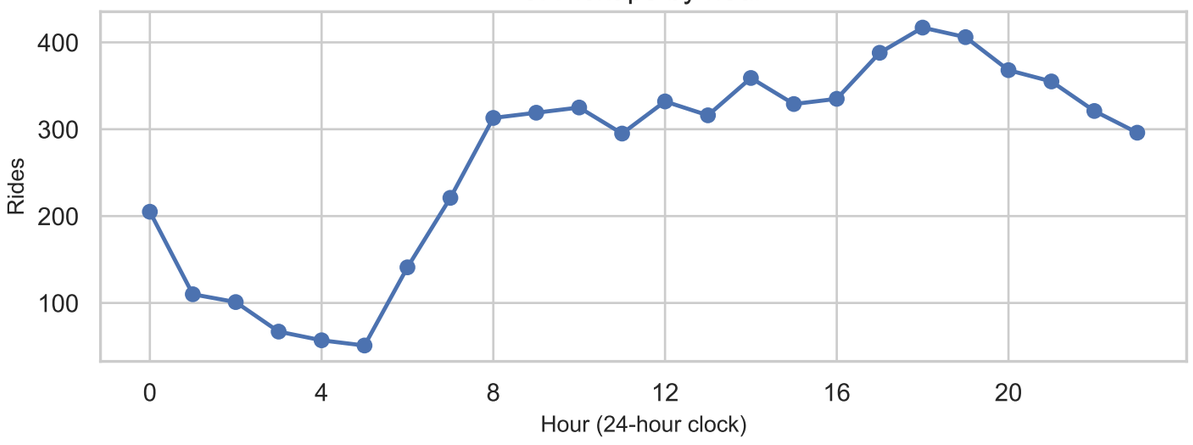

1. Ride distance distribution

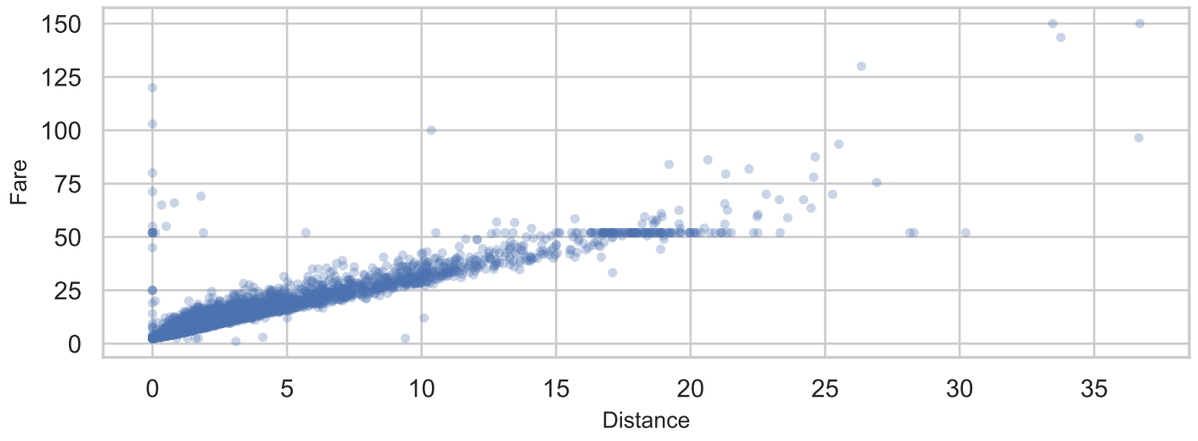

2. Revenue by pickup zone

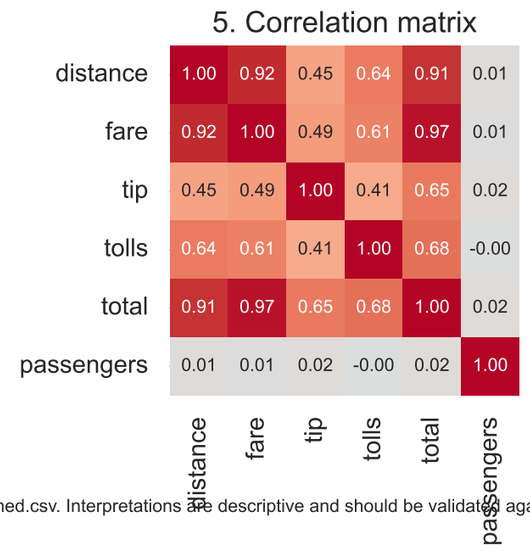

3. Pickups by hour

4. Fare vs. distance

5. Correlation matrix

WHAT THIS MEANS FOR THE BUSINESS

- Distance: Use the distribution to understand common trip lengths and identify long trips.
- Zones: Highest revenue category shown is Yellow Zone (81,740.61 in recorded total revenue). Revenue is not the same as profit.
- Timing: Busiest pickup hour is 18:00 (417 rides). Consider it as a scheduling clue, not a guarantee.
- Fare and distance: correlation = 0.92. Other factors may affect fares.
- Correlation: Relationships help generate questions; they do not establish cause and effect.

Data source: Day 3 cleaned.csv. Interpretations are descriptive and should be validated against broader, current data.
